

Create Secure Electronic Forms Easily & Conveniently

Reduce wastage and save time with Forms on Demand

Lexmark Forms Solution is an affordable, secure and easy-to-implement electronic forms solution designed for mission critical, high performance printing aimed at eliminating pre-printed forms costs, maximising electronic workflows and streamlining processes.

Efficiency made easy

IT and operations teams are constantly looking for opportunities to minimise costs and improve productivity in an effort to combat ongoing budget pressures. One way Lexmark has helped many manufacturing and distribution organisations dramatically reduce costs and improve operational efficiencies is by streamlining print processes throughout the organisation. Lexmark can help you reduce the overall cost of printing by implementing device consolidation, forms consolidation and automated document workflow processes. We can increase the speed at which business critical information gets to the appropriate internal and external contacts, while improving document security and helping you to print less.

Eliminate paper processes

Invoicing, faxing and picking slips is the ideal place to automate the existing paper-based processes. By migrating from paper-to-digital solutions, your operations can eliminate costly pre-printed multi-part forms and 3rd-party storage facility expenses, while speeding the processing time and increasing security of confidential information. Lexmark solutions can capture a print job, reformat the page to add barcodes of key indexing information and print on a single sheet of plain paper rather than carbon based or pre-printed media. This document can be delivered to multiple predetermined recipients automatically in the format they need – paper, email, fax or EDMS. By processing information electronically customers, vendors and partners alike can have immediate on-line access to information in a secure environment for tracking and retrieval purposes. Whether it's a bill of lading, packing list, manifest, dynamic form or other document required for managing your business process and workflow, Lexmark can help you streamline these processes.

Award-Winning Printers

The award-winning Lexmark printers include many features right out of the box. The only limit to what your business can do with these devices might just be your imagination.

Easily and securely integrate Electronic Forms into your business

Pre printed colour Forms, brochures and marketing collateral have amounted to 40% of all pre-printed hardcopy wastage in the workgroup. Corporate brand changes, messaging updates and obsolete forms collectively lead to excess wastage and increased business costs. The Lexmark Forms Solution is an affordable, secure and easy-to-implement electronic forms solution designed for mission critical, high performance printing aimed at eliminating pre-printed forms costs. Lexmark Forms Solutions will help you market you business more effectively.

Forms on demand

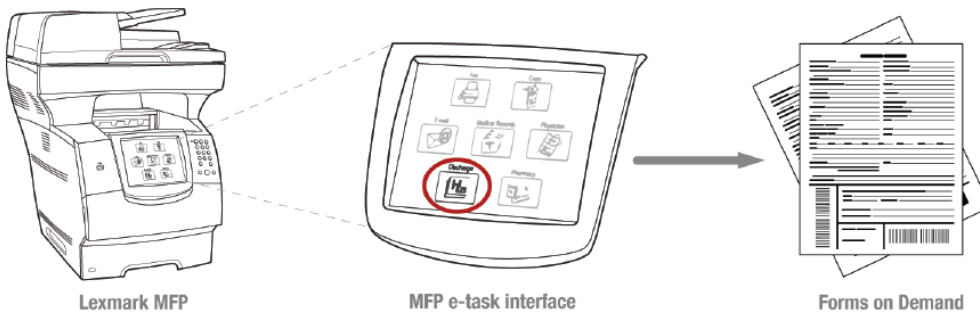

If you need a robust e-forms software platform, Lexmark Document Solutions Suite provides an easy-to-use, low-cost, full-function system for implementing forms on demand. The web-based desktop Document Portal makes it easy to organise and manage thousands of forms. Not only can clinicians easily select and print the most current form version, but they can merge patient information onto the form using Lexmark's Document Producer software. There is no longer a need to stick labels on pre-printed forms. Each form becomes a personalised document printed with specific bar codes to identify the document type and patient demographics. Using Lexmark's award-winning, customisable, intuitive e-Task interface allows for easy integration into your existing EMR system and almost no user training.

Forms migration services

Forms Migration Services let organisations with limited IT resources enlist the help of Lexmark Professional Services and Certified Solutions Providers to prepare forms and documents for scanning into an EMR system. Available services include:

- Forms and document redesign and bar coding
- System architecture for availability and downtime solutions
- Installation / configuration of e-forms software
- IT and end-user training

Forms on Demand Process
